                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 7, Application US/08472028A
Patent No. 5767373
GENERAL INFORMATION:
APPLICANT: Ward, Eric R
APPLICANT: Volrath, Sandra
TITLE OF INVENTION: Manipulation of Protoporphyrinogen
TITLE OF INVENTION: Oxidase Enzyme Activity in Eukaryotic Organisms
NUMBER OF SEQUENCES: 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              576 cacaagcatccagattgttcaggagttggccaagaaggctgaccaggtaaccatgtttat

The patent discloses novel polynuclectides encoding Exophiala spinifera funchisin degradative or transport enzymes such as flavin monocoxygenase. Eldehyde dehydrogenase, permease and pajvoprotein. A kumonisin esterase erzyme with at least one fumonisin degradative enzyme is useful for erzyme with at least one fumonisin degradative enzyme is useful for decoxifying fumonisin or a structurally related mycotoxin present in harvested grain, on application to a plant or to harvested grain or a structurally related mycotoxin present in harvested grain, or to processed grain that is to be used as animal corrected or muman feed, or as a silage. Nuclectide fragments of the present in twention are useful as probes and primers. They can be introduced into microorganisms that multiply on plants to deliver enzymes to conclude a vector into a microbial host and the degrading enzymes are introduced via a vector into a microbial host and the transformed host is supplied to the environment, plants or animals for reducing the invention are fermented in a bacterial host and the resulting bacteria is processed and used as a microbial spray. The nucleotide sequences is present an example fumonish and resist its toxic effects.

C The present DNA sequence is the flavin monoxygenase coding sequence
                                                                                                               Novel polynucleotides encoding Exophiala degradative or transport relayme which is useful for detoxifying fumonisin or structurally related mycotoxin during processing of grain for human or animal food consumption

function degradative or transport enzymes such as flavin monoxygenase, aldenoisin degradative or transport enzymes such as flavin monoxygenase, aldenyde dehydrogenase, permease and progredein. A fumonisin esterase aldehyde dehydrogenase, permease and progredein. A fumonisin esterase enzyme with at least one fumonisin degradative enzyme is useful for detoxifying fumonisin or a structurally related mycocoxin present in detoxifying fumonisin or a structurally related mycocoxin present in harvested grain, on application to a plant or to harvested grain or harvested grain, on application to a plant or to harvested grain or a silage. Nucleotide fragments of the present or human feed, or as a silage. Nucleotide fragments of the present into microcorganisms that multiply on plants to deliver enzymes are introduced via a vector into a microbial host and the transformed host is supplied to the environment, plants or animals for reducing the proposition or a fermented in a bacterial host and the resulting bacteria is parcessed and used alone or in combination to engineer microbes or other or present sequence is a genomic DNA encoding szophiala spinifera or the present sequence is a fumonisin degradative enzyme.
Fumonisin; degradative enzyme; transport enzyme; flavin monooxygenase; addahyde dehydrogenase; permease; p-tyvcorcheth; tumonisin esterase; detoxification; mycoccoxin; animal feed; human feed; silage; transgenic plant; transgenic animal; microbial spray; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel polynucleotides encoding Exophiala degradative or transport enzyme which is useful for detoxitying fumonisin or structurally related mycotoxin during processing of grain for human or animal food
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Folkerts O, Crasta OR;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Genomic DNA from M.avium (serotype 2) was partially digested with Sali and 30-40kb fragments were inserted into cosmid pHG79.

Recombinant cosmids were packaged in vitro and used to transform E.coli HB101. DNA was isolated from positive colonies and the Sali fragments were tested for hybridisation with M.avium.

M.intracellulare and M.tuberculosis H37v. Cosmid clone I-6 (AAQ41978) hybridised to M.avium only; clone I-1 (AAQ41979) hybridised with DNA from both M.avium and M.intracellulare. I-6 and I-1 have been cloned in pucies to produce plasmids pM01 (CNCM I-1138), respectively. The invention also covers oligonic leaders and primers derived from the sequences of I-6 and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to capression of genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the Fr cells and a substrate of expressed sequence taggs (EST). The ESTs are used in the methods for monitoring differential expression of genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from Fr cells allows the production potential of the microorganisms to be improved. New genes may be increorganisms to be improved. New genes may be identified and gene copy number variation and stability can be monitored. The expression of genes can be used to study how Fr cells adapt to changes in culture conditions, environmental stress, spore ongineering. Using ESTS provides several advantages over genomic or analysis of the results. ARF01478 to AAF11851 represents ESTS from Aspergillus pushes a new increased to stabilistic analysis of the results. AAF11853 represents ESTS from Aspergillus and AAF1873 represents ESTS from Aspergillus and confident and a confident ESTS from Aspergillus and confident and a confident ESTS from Aspergillus and confident ESTS from Aspergillus and confident and a confident ESTS from First and confident and a confident ESTS from Aspergillus and confident and a confident ESTS from First and confident and a confident ESTS from First and confident and a confident 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags -

                                                                                                                                                                                                                                                                           The invention relates to evaluating strain variation within and between different populations of the tubercollosis bacterial pathogen. Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (An199683) and H37Rv (AA199681). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of the tuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 4403765 BP; 757105 A; 1447799 C; 1441301 G; 757371 T; 189 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          monitoring.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=629432881.
Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Ry differ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           156 otggcactggaaccgctaccctggcgctcgtgttgattcggaagacgcccttctaccaact 215

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DA 1569517 CGACCGGGGGGATTCAGGGACTACCTCGTGGTCGAAGCCGGCGACGGTGTCGGGGGAC 1569458
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID~6294328B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen. Wycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the first strain at positions in the complete sequence of the more partial at positions in the discoundable of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA19968) and H37Rv (AA199682). The method is useful for evaluating strain variation of tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 4411529 BP; 758565 A; 1449983 C; 1444602 G; 758379 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        156 ctggcactggaaccgctaccctggcgctcgtgttgattcggaagacgcccttctaccaact 215

                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to genes from Rhodococcus ruber involved in cyclododecanone degradation pathway. A 10 kb cluster from R. ruber was cyclododecanone degradation pathway. A 10 kb cluster from R. ruber was related that comprises genes (designated cdda, cddb, cddy, cddy, cddr, cddb) encoding enzymes such as dodecanoid synthesizing enzyme, cyclododecanone monocoxygenase, lauryl lactone esterase, 12-hydroxylauric acid dehydrogenase, Host cells comprising the nucleic acids are used for the production of dodecanedioic acid when contacted with cyclododecanone, lauryl lactone when contacted with cyclododecanone, 12-hydroxy lauric acid when contacted with 12-hydroxy lauryl acid when contacted with 12-hydroxy lauric acid when contacted with 12-hydroxy lauric acid when contacted with 12-cox lauric acid. They are also useful for the production of hydroxy acids when contacted with cyclodocanone, c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ĥ

NR234. Open reading frames (ORF) derivable from the nucleotide sequences are claimed. The nucleotide sequences or ORFs can be used e.g. in the transportation of compounds to and from an organism which is a host to at least one of the nucleotide sequences. ORFs or proteins, the degradation and/or metabolism of organic, inorganic, natural or xenobiotic substances in a host organism or the modification of the host range, nitrogen fixation abilities; for obtaining a synthetic minimal set of ORFs required for functional Nizobium-legume symbiosis, especially for nodulation efficiency on host plants.

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions, acnes, The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in Infections of Bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a

patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein of antibodies prolypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAUSS673-AAUS6689 and AAUG7603-AAUG7606.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes isolated nucleic acid molecules which encode fumonisin degradative enzymes and transporters from a Bacterium 2412.1 fumonisin catabolic gene cluster. The Bacterium 2412.1 was isolated from maize. The nucleic acid molecules can be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid molecules which encode fumonisin degradative enzymes and transporters, used for detoxifying fumonisin or related mycotoxin or reducing the pathogenicity of fungi producing fumonisin .

producting an enzyme for detoxifying fumonisin or a structurally related mycotoxin, e.g. in harvested grain, or processed grain which is to be used as animal feed or sliage. Ruminal microorganisms trensformed with the nucleic acid molecules can be used as problotic compositions or as feed inoculant compositions. Plants transformed with the nucleic acid molecules can degrade or transport fumonisin. The plants may be e.g. molecules can degrade or transport fumonisin. The plants may be e.g. maize, sordhum, wheat, tomanch, sovybean, alfalfs sufflower, Brassica, cotton or rice. The products can also be used as detection reagents for tumonisins and related compounds. AAZ91253 represents the Bacterium 2412. I fumonisin catabolic gene cluster, and AAZ91254 to AAZ91273 represent isolated nucleic acids from Bacterium 2412.1 which encode AAY80085 to AAX80104. AAZ91286 from Bacterium 2412.1 which encode AAY80085 to AAX80104. AAZ91286 from AAZ91274 to AAZ91286 are given in the sequence listing from the present specification but are not specifically mentioned further.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid molecules which encode fumonisin degradative enzymes and transporters, used for detoxifying fumonisin or related mycotoxin or reducing the pathogenicity of fungi producing fumonisin .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 423 gtatotoattotogotacygggttgctccacagygaagcacactcccgcactcccggcct 482

The present invention describes isolated nucleic acid molecules which encode fumonisin degradative enzymes and transporters from a concode fumonisin catabolic gene cluster. The Bacterium 2412.1 fumonisin catabolic gene cluster. The Bacterium 2412.1 was isolated from maize. The nucleic acid molecules can be used for producing an enzyme for detexifying fumonisin or a structurally related mycotoxin, e.g. in harvested grain, or processed grain which is to be used as animal feed or silage. Ruminal microorganisms transformed with the nucleic acid molecules can be used as probiotic compositions or as feed inoculant compositions. Plants transformed with the nucleic acid molecules can degrated or transport fumonisin and can reduce the maize, sorghum, wheat tomato, soybean, alfalfa, sunflower, Brassica, contron or Tice. The products can also be used as detection reagents for fumonisin and related compounds. AAZ91231 sepresents the Bacterium 2412.1 fumonisin actabolic gene cluster, and AAZ9124 to AAZ91273.

Terpresent isolated nucleic acids from Bacterium 2412.1 which encode AAX80085 to AAX90104, AAZ91286 to AAZ91291 represent sequence used in the examplification of the present invention. AAZ91274 to AAZ91285 are given in the sequence listing from the present specification but are not specifically mentioned further.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vaccine;

```
The invention provides a binding structure, such as an antibody, binding to tumor cells, especially epithelial tumor cells such as colorectal, paraetic, breast or lung carcinoma cells. The binding structures, target structures to the binding structures or the substances, i.e. antisense oligonucleotides and ribozymes, are useful in the therapy and in vitro histopsthological diagnosis and prognosis of human malignant disease. The present sequence represents the nucleotide sequence of antibody directed against K293 superantigen.
